

BuildCo *HR AI*

A Voltade demo for BuildCo Group — an HR helpdesk that hires, onboards, answers staff, and gets smarter every day.

Web: demo-hr.voltade.app · WhatsApp: +65 8000 0001 (wa.me/6580000001)

ACCESS

Open demo-hr.voltade.app and sign in with an **email OTP** — a one-time code is sent to your inbox. Allowlisted domains: [@buildco.sg](#) · [@buildco.com.sg](#) · [@voltade.com](#).

First sign-in auto-enrols you as a member of the **BuildCo Group** workspace.

TRY THE AI ON WHATSAPP

1. **First time?** [Tap here to register your number →](#) WhatsApp opens with the command `/link a8f4b2c9e0d1` pre-filled. Just hit send.
2. **Or scan the QR code** from the web app: sign in → **Channels** → row for *BuildCo HR AI (WhatsApp)* → click the **Link QR** button. Point your phone camera at the QR; it opens WhatsApp with the same command pre-filled.
3. Once linked, just chat normally — *"Can I apply for the Senior PM opening?"* · *"What's the leave policy for new hires?"* · *"Any site supervisor opening?"*
4. **BuildCo HR AI** replies within seconds. The same conversation appears in the web **Inbox**.
5. Staff can take over, drop a private note for a teammate, or let the AI keep going.

What the system does

A SELF-IMPROVING AI ASSISTANT

BuildCo HR AI doesn't just answer — it **learns**. Every time a staff member corrects it, leaves a note, or overrides a reply, the AI updates its own memory. The next conversation is a little better. Over weeks, it picks up the company voice, the recruiting playbook, who handles what, and the small exceptions that make BuildCo *BuildCo*.

There are three layers of memory: what it knows about itself, what it knows about each candidate or employee, and what it has learned from each staff member it works with.

ADAPTIVE SOFTWARE, NOT STATIC FORMS

Most HR tools are forms. This one shapes itself around how BuildCo actually works. Staff teach it by example — a private note, a correction, a one-line rule — and the workflow adjusts. New policy on dormitory check-ins? Tell the AI once. New escalation rule for site-safety questions? It remembers from then on.

ONE INBOX FOR WHATSAPP AND WEB

Every conversation — candidate on WhatsApp, employee on the portal, walk-in via email — lands in a single inbox. Staff reply once, in plain language, and the message goes back through whichever channel the person used. No tab juggling, no "which system was that in".

BUILT-IN HR FEATURES

- **Recruiting** — live pipeline across all open roles. Add candidates, schedule interviews, move stages with one click. The AI watches the pipeline and surfaces what's gone stale.
- **Onboarding** — checklist per new hire (paperwork, access, training, intros). Upload documents, mark items done, the AI fills in the gaps it can.
- **Leave** — staff request, manager approves, balances update instantly. No spreadsheets.
- **Internal notes** — @-mention a teammate inside any conversation. They get pinged on WhatsApp once they verify their number. Notes are private to staff; the candidate never sees them.
- **Policy knowledge** — the AI reads from a shared knowledge base (leave policy, work-pass rules, dormitory info, onboarding checklist, active projects). Update the file, the AI updates its answers.

GUARDRAILS

The AI knows what it shouldn't do on its own. Site-safety questions always escalate to a human. Work-pass questions route to HR Ops. Salary bands are never quoted. These rules live in plain text and can be edited without touching code.

HUMAN-IN-THE-LOOP CHANGES

When the AI wants to update a contact, schedule an interview, or change a record, it can either do it directly (for low-stakes actions) or **propose** the change for staff approval. Every proposal shows up in one place with a clean accept/reject view. Nothing happens behind your back.

AUTOMATIONS THAT RUN THEMSELVES

The AI checks in on its own schedule — a morning briefing at 8am, a sweep through stale conversations every 15 minutes, a nudge for interviews that didn't get scheduled. Staff don't have

to remember; the AI does.
